

FISH
packaging

We are one of the largest suppliers of fish boxes in the UK & Ireland, manufacturing millions of boxes every year for processors, wholesalers and suppliers.

Solidboard packaging is the perfect medium for packing fish. These packs are generally pre-glued and delivered flat, greatly reducing storage space compared to polystyrene.

Fish boxes come in standard sizes, from ½ stone to 4 stone with either standard or leakproof bases. However, we can supply any size to suit your requirements either from our factory in South Wales or our warehouse in Grimsby.

The material generally used for packaging in the fish industry is a water-resistant board with both sides coated in polyethylene. For certain products, such as Mackerel, other types of board can be used.

We have developed packs to eliminate the need to use polystyrene, both for home delivery in ambient transport, through to larger quantities packed in chilled vehicles.

To supplement our range of fish boxes we also supply gold & silver boards, used to present a variety of foods including smoked salmon.

ABOUT US

We're an independent, family-owned business with a flexible and innovative approach. Starting in 1999 as a wholesaler, we moved on to being a converter and now, a fully-integrated manufacturer with FSC certification.

As the only BRC certified manufacturer of Solidboard in the UK & Ireland, working with us means you're genuinely buying British boxes.

By the whole process happening under one roof, our lead times are significantly lower than we see as standard in the industry, meaning we often make-to-order, as opposed to laying down significant amounts of stock and pressuring customers into taking it. Of course, if you're a higher volume user, in a more volatile marketplace, we can make higher volumes and you can allow us to manage your stocks.

With an in-house design & graphics department, as well as a full array of sample and testing kit, we like to take on new projects and see how we can help you.

Our standard board grades are 99% plastic-free and fully recyclable but we're still looking hard at totally eliminating any plastic, so they're fully biodegradable and compostable too.

“Thinking
outside the
box so you
don't have to.”

HEATHPAK
Solidboard & Corrugated Packaging

Solidboard

A family business with a passion for packaging

Unit 1A Oakwood Close • Pen-y-Fan Industrial Estate
Crumlin, Newport • NP11 3HY

Our process

Laminator

Our versatile laminator takes up to 5 reels of FSC paper and converts them into solidboard at rate of 250m² of board/min.

Just by changing a few reels, we can go from the thinnest non-PE lined poultry lids to waterproof & resistant, high-performance export base material for salmon being shipped worldwide.

Die-cutter

Cutting and creasing up to 5,000 sheets an hour, both of our die-cutters can work with solidboard & corrugated.

DIGITAL PRINTING

for short run options

Off-set printing

Capable of printing magazine quality images, using CMYK+1 special colour and a varnish/gloss station, we can deal with any job in our industries.

We can replicate any existing flexo prints, just with a far sharper finish: upgrade your current brand or introduce a premium line to drive sales.

T: 01495 212283 • W: www.heathpak.com

3 BIG ADVANTAGES

of using our digital printing service

- 1 No expensive up-front set-up costs for print plates or stereotypes. A perfect fit to limited edition lines which might otherwise be prohibitive. This also means lower stock-holding levels and the ability to change without incurring costs.
- 2 Incredible colour and quality. No incremental increase in charges for multiple colours.

3 Short lead-times - Quick samples

If we're printing on an existing size, we'd be able to get the boxes made in a matter of days. A great service.

Industries our boxes are used in:

Please don't hesitate to get in-touch, We'd love to hear from you.

Folder-gluer

This is the final step in the process, taking printed, cut and scored board then folding & gluing it into any number of designs including leakproof, double-wall, crash-lock and one-piece boxes with integrated lids.

These are then bundled and palletised by our end-of-line robot, ready to be delivered to your premises.
